I am an instructor of Data Structures and Algorithms in the Computer Science program at the University of Havana. I recently graduated with a bachelor's degree in Computer Science from the University of Havana, supervised by Dr. Felix Gotti and Dr. Luis Ramiro Piñeiro. I am currently working on my application to graduate school. During the past 4 years, I have been conducting research in factorization theory under the supervision of Dr. Felix Gotti, with a focus on the atomic structure of commutative rings and monoids. I also have a keen interest in theoretical computer science, particularly in areas such as cryptography and complexity theory.
